Subject : Support to Maps4Society

Dear Mr. Versluis,

It is with great interest that we learned about your initiative to develop the consortium Maps4Society. Through this letter, Fugro GeoServices confirms its support to this consortium.

Fugro is one of the world's largest contractors in the realm of geospatial information, with clients in the Oil and Gas industry, Governments, Infrastructure and Construction. Fugro GeoServices B.V. is the Dutch operating company of Fugro N.V.

Fugro fosters a culture of innovation, for which we have received awards such as the Erasmus Innovation Award in 2011. Besides in-house R&D we support related research with Dutch universities, both in-kind and in-cash.

We believe that your consortium offers a unique opportunity to continue research on geo-information. From our daily practice we experience the importance of geo-information to clients in public and private sectors. We expect that the outcomes of the programme can directly be applied in these fields. From Fugro's perspective, a strong domestic research programme will also strengthen our international position.

We therefore declare that we are open to discuss opportunities for contributions to project proposals, in particular when related to our current research topics on Object detection, Big Data and Geo-Information governance.

Should you have further questions regarding Fugro's participation in this project, please contact Martin Kodde (070 3170928, m.kodde@fugro.nl).

Yours sincerely,
Fugro GeoServices B.V.

Martin Kodde
Manager Research & Development
